

CJV #1935, 1936, 1937, 1938, 1939

60" x 10' Sour Service 675psi Horizontal Jet Pump Separator Package

Designed to work with 150HP Jet pump packages (sold separately), these separators are designed two phase, but the designers really had a fascination with level gauges, and as such you will have amazing optics on what is happening inside the vessel. There are 5 available, 2 are new – 3 are used and in great condition still. All of them are located in an easy access yard in Grande Prairie, Alberta for easy removal and transport to your site.
